

Decision Analysis for Operation and Maintenance Professionals

14 October - 1 November

Amsterdam (Netherlands)

Decision Analysis for Operation and Maintenance Professionals

course code: M1043 From: 14 October - 1 November 2024 Venue: Amsterdam (Netherlands) - course Fees: 6750 Euro

The Course

This programme examines lean thinking and techniques for decision analysis with emphasis on the lean approach and responsiveness to the customer requirements. Decision-making is the most central human activity, intrinsic in our biology and done both consciously and unconsciously. We need it to survive. Taking a decision is not just a question of selecting a best alternative. Often one needs to prioritise all the alternatives for resource allocation among a portfolio of options, or to examine the effect of changes introduced to initial judgments.

Breaking a problem down into its constituent parts or components, in the framework of a hierarchy, and establishing importance or priority to rank the alternatives is a comprehensive and general way to look at the problem in a formal manner. This kind of concern has been loosely called multi criteria decision-making (MCDM). In operational research and management science today, decision-making is essentially thought of in the focused area of research concerned with goals and criteria and how to measure and rank them.

In our complex world, there are usually many solutions proposed for each problem. Each of them would entail certain outcomes that are more or less desirable, more or less certain, in the short or long term, and would require different amounts and kinds of resources. We need to set priorities on these solutions according to their effectiveness by considering their benefits, costs, risks, and opportunities, and the resources they need.

The Goals

- Improve productivity through use of better, timelier information.
- Understand how world-class organisations solve common asset management problems.
- Optimise planning and scheduling resources.
- Carry out optimised failure analyses.
- Optimise asset management budgets by the avoidance of unplanned equipment failures in service.
- Develop a practical approach of an action plan to utilise these technologies in their own areas of responsibility, fitting them into the overall strategy, and measuring benefits.

The Benefits

- Accomplish strategic change in the organisation in a more productive manner
- Build and maintain effective and efficient procedures in the organisation
- Complete work tasks on time and on budget
- Develop skills in managers which will raise the capability, skill and morale of colleagues
- Improved operating performance in completion of assignments
- Acquire useful work task management skills
- Develop skills in problem solving and decision making
- Develop interpretation skills of analytics to support decision making
- Gives you a proper knowledge of the basic principles of operations management
- Helps you in planning and developing a future career
- Identify the Key Performance Indicators within your management area

- Know how to compare alternatives to support decision making
- Learn how to apply best practices
- Learn from the experience of other delegates and the trainer
- Learn management techniques to plan, establish priorities and set and maintain deadlines

The Programme Content

Introduction to Decision Making

- Scope and significance of Decisions
- The Decision Making Process
- Choosing Between Options by Projecting Likely Outcomes
- Decision Tree Analysis: decision models; low probability, high-consequence events; valuing additional information and control
- Monte Carlo Simulation: optimisation; advantages and limitations
- Case Studies and Group Exercises

Implementing Multiple Criteria Decision Analysis

- Definition of Decision Analysis
- How, and Why, Bad Decisions are Made
- Problems with Traditional Methods
- Guidelines for Good Decision Analysis

The Analytic Hierarchy Process (AHP)

- What is AHP?
- The Comparative Matrix
- Consistency Analysis
- Sensitivity Analysis
- Benefit/Cost Analysis
- Resources Allocation
- Applications of the AHP (The Concorde Case, Maintenance Strategy, Highway planning)
- Case Studies and Group Exercises

Risk Management through Failure Mode & Effect Analysis (FMEA)

- Risk Mitigation
- Fault Tree analysis
- Risk Priority Number
- The Criticality Matrix
- Equipment Criticality Grading
- Cases from Oil and Gas Industry and others
- Modelling Reliability of Systems
- Series and Parallel Systems
- The Redundancy Concept
- Types of Redundancy
- When to Use Redundancy

MRP and ERP Systems

- What is ERP and how did it develop
- What is MRP System
- What is MRPII System
- Planning and Control
- The Bill of Materials
- Master Production Schedule
- Scope of Decisions
- Case Studies and Group Exercises

Optimum Performance Measure

- Challenges of Performance Measures
- Performance Measures as a Continuous Improvement Process
- Desirable Features in Maintenance Performance Measures
- Best and Worst Practices in Performance Measures

The Overall Equipment Effectiveness as a Source of Best Practice in Maintenance

- Advantages of OEE as an Improvement Programme
- Lean Maintenance through the Use of OEE
- Analysis of the Six-Big Losses
- Case Studies and Group Exercises

The House of Quality

- Basics of design evaluation
- How to convert the voice of the customer to engineering solutions for a better design
- Apply the concept of House of Quality in practical cases

Decision Analysis for Optimisation of Maintenance Activities

- How to get the most of your CMMS?
- Benefits that can result from CMMS
- Optimum Decisions for Maintenance Policies
- Unmet needs in Responsive Maintenance
- Key Features of Next Generation Maintenance Systems
- How to transform Data to Decisions
- Examples of Approaches and Case Studies
